

ASSESSMENT GUIDELINES

Students will be given two files:

SOFTWARE ASSESSMENT - FINAL TEST → a PDF file that contains all task descriptions.

final_assessment.py → a Python script file that contains skeleton code and testing examples for various tasks.

Students need to rename final_assessment.py file to prefix it with their own name and then use this file for the exam.

Instructors can use the following files:

SOFTWARE ASSESSMENT - ANSWERS FINAL TEST → a PDF file that contains the answer for question 4

final_assessment_answers.py → a Python script file that contains answers to questions 1-3.

This test is a closed book 2h test, where students are allowed to use PyCharm.

Students will be submitting <student-name>_final_assessment.py file at the end of the 2h period. (If they absolutely want to, they can also submit a separate doc file for question 4, but it is perfectly fine if they include it in the .py file.)
